

Cardinal Health™ Inventory Manager

Effective inventory management can increase efficiency and improve cash flow

Cardinal Health™ Inventory Manager (CIM) is a web-based automated solution, helping pharmacies tackle what is often their biggest challenge — inventory management. CIM helps pharmacies remove excess inventory and improve turns while recommending ordering needs based on usage and demand. With prescription inventory equating to more than 90% of a pharmacy's revenue stream,¹ optimizing supply and doing more with less can both improve cash flow and enable the pharmacy to spend more time on patient care.

Inventory visibility at your fingertips

Take action on critical inventory needs, including excess inventory and audits, while keeping a close pulse on daily to-do items.

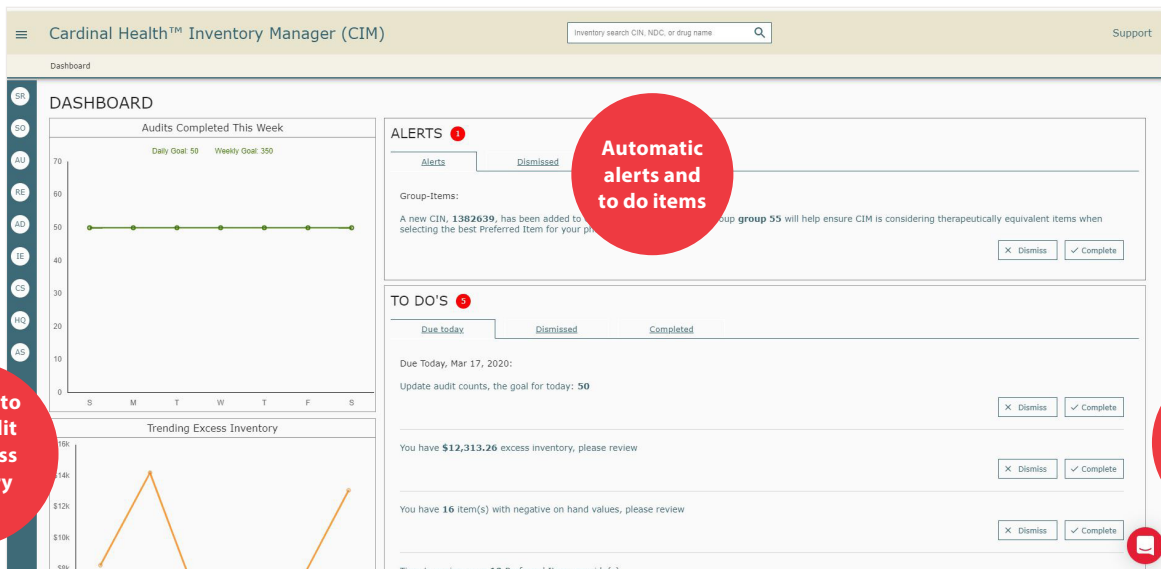

Real-time inventory updates

Automatic alerts and to do items

Visibility to daily audit and excess inventory levels

Easy access to account support

The CIM difference

- Intuitive, user-friendly design
- Automated ordering of pre-determined quantities based on demand
- Ability to control inventory at the NDC and therapeutic group levels
- Access to comprehensive reports
- Dedicated consultative account support

Retail independent pharmacies using CIM see a positive impact to pharmacy performance within months of implementation²

- More than 30% increase in turns
- A decrease in excess inventory of at least 20%
- Time savings of more than 30%

Ready to gain control of your pharmacy inventory?
